SUMMARY

Computer Science undergraduate (GGSIPU '27) who builds and ships production-grade full-stack and AI-powered systems. Proficient in MERN stack, LangChain, RAG pipelines, and scalable backend architecture. Focused on writing clean, deployable code that solves real problems — not just completing tutorials. Actively seeking SDE and Agentic AI internships where I can contribute, learn fast, and build things that matter.

EDUCATION

Bhagwan Parshuram Institute of Technology, Delhi
B.Tech - Computer Science and Engineering - CGPA - 7.0

2023 – 2027
Rohini, New Delhi

PROJECTS

Coursera-AI [🔗](#) | React, Node.js, MongoDB, Redis, LangChain, Gemini AI, Bull.js **Mar 2026**

- Engineered and deployed an AI learning platform (MERN + Gemini) enabling structured course generation with chapter content, quizzes, and YouTube videos in under 60 seconds.
- Built industrial RAG pipeline using LangChain LCEL — 3072-dim Gemini embeddings stored in MongoDB Atlas Vector Search with cosine similarity retrieval.
- Architected Bull.js background job queue with Redis, streaming real-time generation progress to frontend via SSE, offloading 30-60s AI tasks from HTTP.
- Engineered JWT auth with refresh token rotation (httpOnly cookies) + 3-tier rate limiting, Redis caching, and Winston logging — reducing database load by 70 percent.
- Developed AI-generated MCQ quiz system per chapter with score tracking, badge rewards, answer explanations, and a dedicated quiz analytics dashboard.

Slotify [🔗](#) | JavaScript, React, MongoDB, Express, LLM, LangChain, Groq AI, JWT Auth **Apr 2026**

- Engineered an AI-assisted conversational booking system using LLM-based intent and entity extraction, converting natural language into structured booking inputs.
- Implemented a state-driven, deterministic decision engine to handle multi-turn conversations and enforce reliable booking workflows independent of AI.
- Designed an availability validation system using schedule templates and dynamic slot generation, preventing conflicts and ensuring real-world booking constraints.
- Developed RESTful APIs with session management and validation layers for conflict detection, duplicate prevention, and consistent data handling in MongoDB.

ApplyPilot. [🔗](#) | LangGraph, LangChain, MERN, Redis, BullMQ, Claude AI - (In Development) **Apr 2026**

- Building an AI system for JD parsing, resume tailoring, auto-applying, application tracking, and interview preparation.
- Designing a LangGraph multi-agent pipeline with shared state, conditional loops, and parallel execution.
- Implementing resume optimization using semantic similarity (embeddings) and ATS keyword matching.
- Engineering async workflows with BullMQ + Redis, supporting retries, checkpointing, and human-in-the-loop.

SKILLS

Languages: Python, C++, JavaScript

Technologies/Frameworks: HTML, CSS, Tailwind, React 18, Node.js, Express.js, Next.js

Databases: MongoDB, MongoDB Atlas Vector Search, Redis

Agentic-AI: LangChain, LangGraph, RAG, Open Claw, Vector Embeddings, Claude Code

DevOps/Tools: Git, GitHub, VS Code, Vercel, Render, Bull.js, JWT, REST APIs, SSE, Docker

Core Knowledge: Data Structures, Algorithms, Computer Networks OOP, DBMS, OS

Soft Skills: Teamwork, Problem-Solving, Communication, Time Management

CERTIFICATIONS

- Forage Virtual Experience — Commonwealth Bank Software Engineering - Feb 2026
- Forage Virtual Experience — Deloitte Technology - Feb 2026

EXTRACURRICULAR

- Participated in college-level hackathons, collaborating in teams to build full-stack projects.
- NSS Member from 2023 to 2024.
